Inside Sales earns the most revenue but loses $16.8K: cut its cost to serve

We examined discounting, tier definitions and cost-to-serve to determine where a policy change would have the greatest impact. Three charts narrow the choice to cost-to-serve.

1

THE PROBLEM

Inside Sales is the only tier losing money

Managed and Self-serve each earn a positive net contribution while Inside Sales loses $16,822.

The loss comes from one of three levers: discounts, tier definitions, or cost to serve.

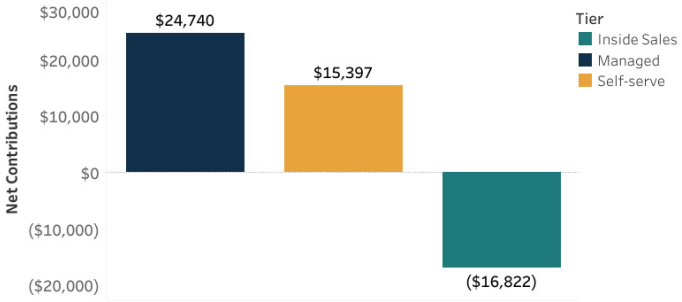

Figure 1: Net contribution by tier. Inside Sales is the only tier below $0.

2

RULE OUT DISCOUNTS

Not discounts: Inside Sales sits mid-pack

Inside Sales' 15.55% falls between Self-serve (16.43%) and Managed (13.97%). Self-serve discounts deepest yet still nets +$15.4K, so **discount percentage does not predict the loss.**

Figure 2. Discount % by tier.

3

RULE OUT TIER DEFINITIONS

Not tier lines: losses span many accounts

Each dot is one account. As shown, many Inside Sales accounts sit below $0, not just a few outliers. That's why it's **not a tier-definition problem**.

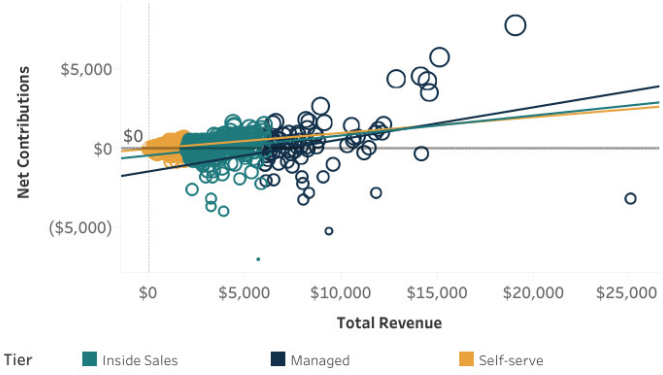

Figure 3. Net contribution vs. total revenue per account. Lines show each tier's trend.
